treatment of diabetes which is administered via oral route or intravenous and subcutaneous routes. The growing prevalence of diabetes, especially type 2 diabetes, and the increasing demand for effective drug therapies for the treatment of diabetes are some of the factors anticipated to upsurge the diabetes drugs market during the forecast period.

According to the Diabetic statistics report published by

the Centers for Disease Control and Prevention (CDC) in 2020, around 30.3 million people in the U.S. were suffering from diabetes among which 23.1 million people were diagnosed with diabetes and the remaining were still undiagnosed. Rise in obesity, growing adoption of a sedentary lifestyle and an increase in the consumption of unhealthy diet are likely to enhance the prevalence of diabetes which are expected to boost the market during the forecast period (Figure 1).
